

Webinar on “The Final Frontier - The Story of Particle Physics”

Date: 22-05-2020 and 23-05-2020

Participants: 889

Prof. Sreerup Raychaudhari, TIFR, Mumbai

Brief Report:

We are living in a world filled with a large variety of tiny little particles with tiny little mass. Their lifetime is also small, smaller than even attometer sometimes, but still they have their significance at the very microscopic level. Prof. Sreerup Raychaudhari took us through this wonderful world of particle zoo. He talked about the stories of their discoveries, their production and decay mechanism, their interaction with other particles and their properties. A peculiarity of his presentation was that it was full of animations which helped the students to understand the concept in easier way. His presentation was highly appreciated by one and all who attended it. An interesting question-answer session was also followed soon after his talk.
